

How to use anki?

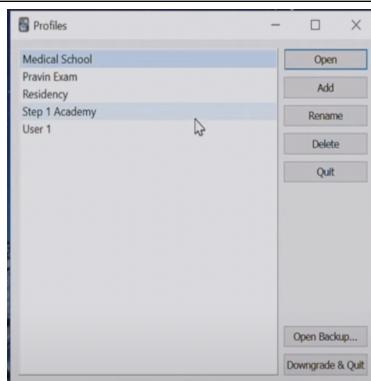

SUBTITLE

link:[click here](#)

link:[Image occlusion tool](#)

Tips:

You can create an account and have it sync to ur email. Then u can access anki with ur phone and other devices.

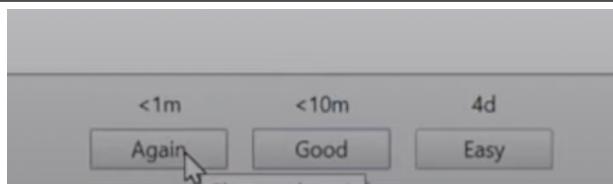

Here, You can also create different profiles.
Which is like a **book > section > pages** like in one-note.
But its a different.
Cuz u have one more heirarchy.
Of **subject/person/topic/field**

Here, just like in one note, we can have subpages. Here we can also put one deck inside another.
e.g

Deck	Due	New
Anki Tutorial	7	7
+ Cardiology	23	20
Cardiology Classre 1 EKG	0	0
Cardiology_	0	0

Death note > (Light Yagami introduction > Ryuk introduction) + (L introduction)

This the beauty of Anki itself.

Again: it will ask in 1m. If we don't know the answer very well. So it will show it to me in a min.

Good:if I do know it well. It will show me in 10m or less.

Easy: something ik it really well. And I am master in. it will show me in 4 days.

Types in Anki deck:

1. Basic(Simple Question and Answer)
2. Basic and reverse flash card. They are good for Language translations, memorizing structures.
3. Cloze flashcard imagine you have a phrase(you have a long thing to memorize) or some equation.

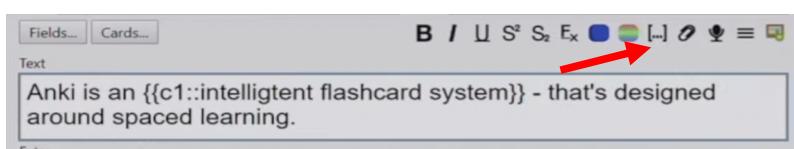

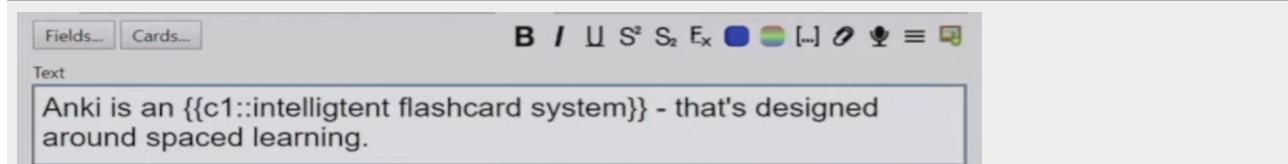

Figure 1: cloze flashcard

One Card into 3. the eq is no of c1.

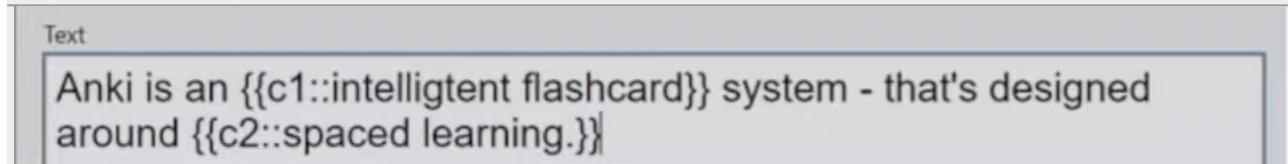

That is you gonna have cards in ur deck as many as u have c1.

The screenshot shows the Anki interface with a single card. At the top, there are buttons for 'Fields...' and 'Cards...'. To the right are various toolbar icons. The main area contains a 'Text' field with the following content:

```
Anki is an {{c1::intelligent flashcard system}} - that's designed around spaced learning.
```

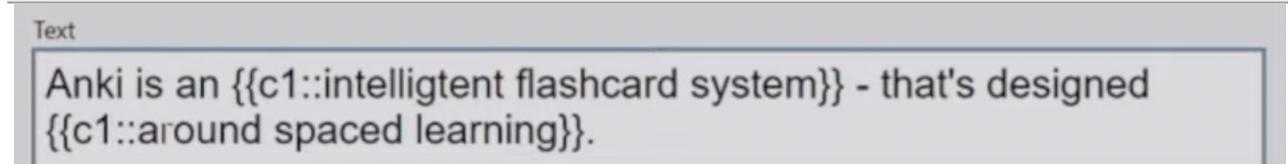

So here 1 card.

The screenshot shows the Anki interface with a single card. The content is identical to the previous screenshot:

```
Anki is an {{c1::intelligent flashcard system}} - that's designed around {{c2::spaced learning.}}
```

So here 2 cards.

The screenshot shows the Anki interface with a single card. The content is identical to the previous screenshots:

```
Anki is an {{c1::intelligent flashcard system}} - that's designed {{c1::around spaced learning.}}
```

If u wanna be ask 2 phrases in a single time.

Here, we have one card.

Table 1: About Cloze type in Anki deck

Image Occlusion tool(its an add-on)

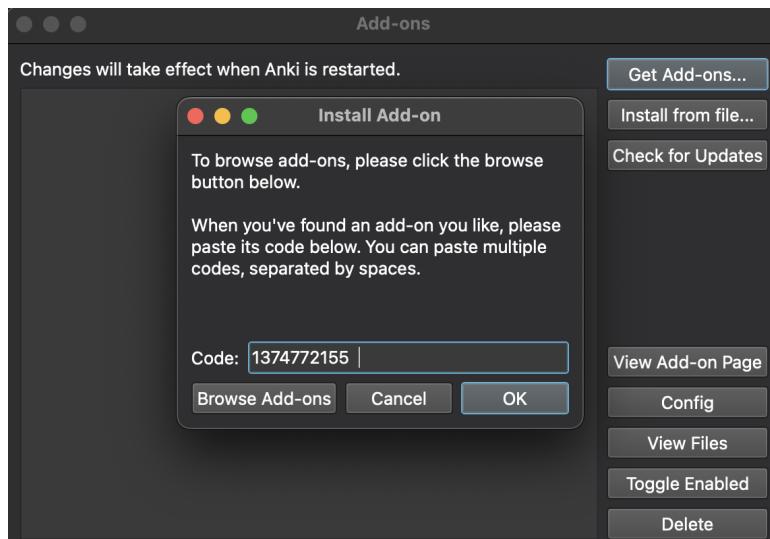

Figure 2: i found this code on the link.

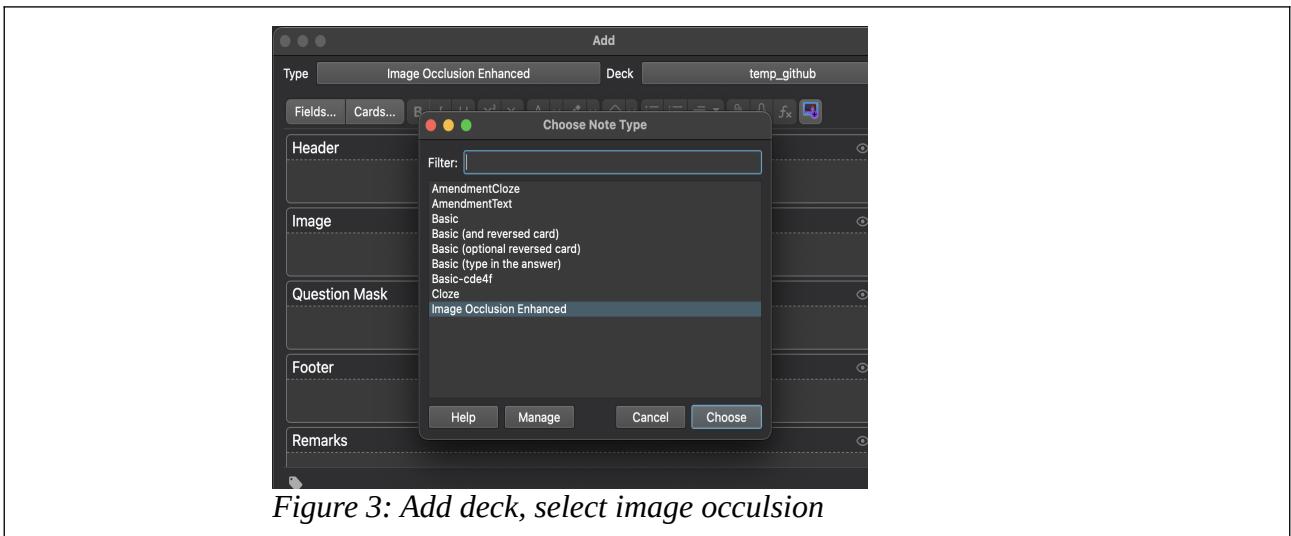

Figure 3: Add deck, select image occlusion

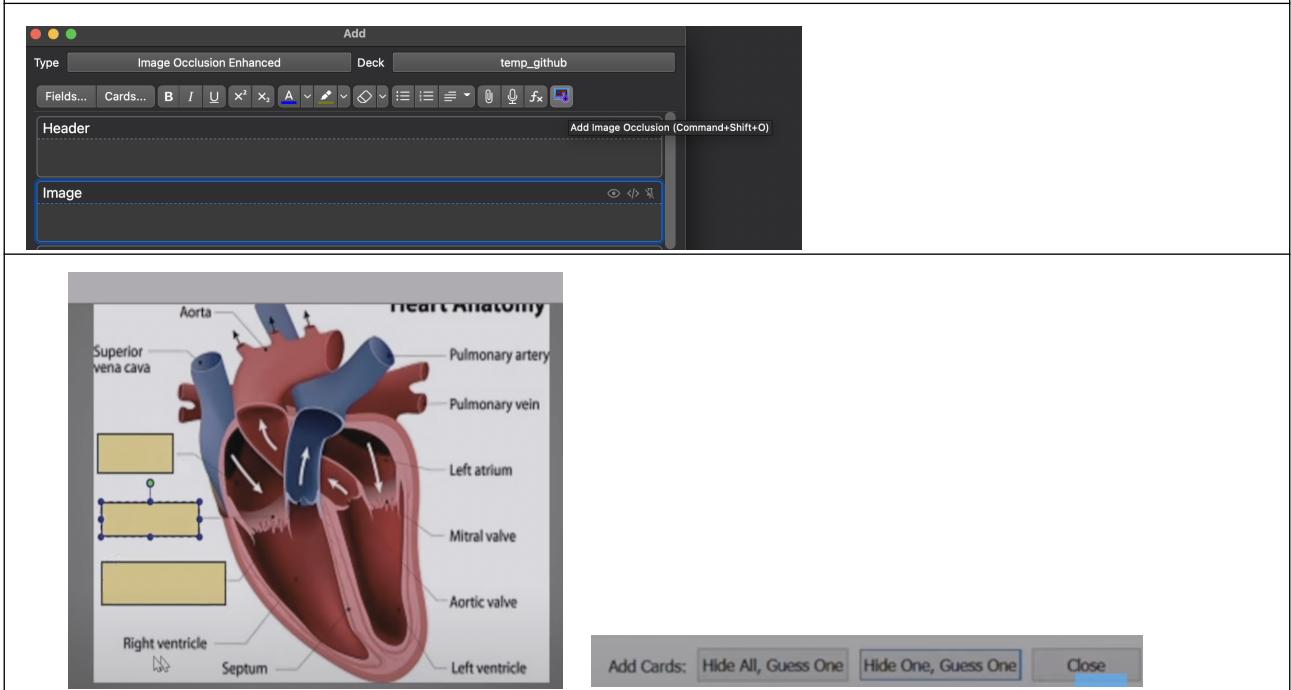

Table 2: Using image occlusion tool

Using tags:

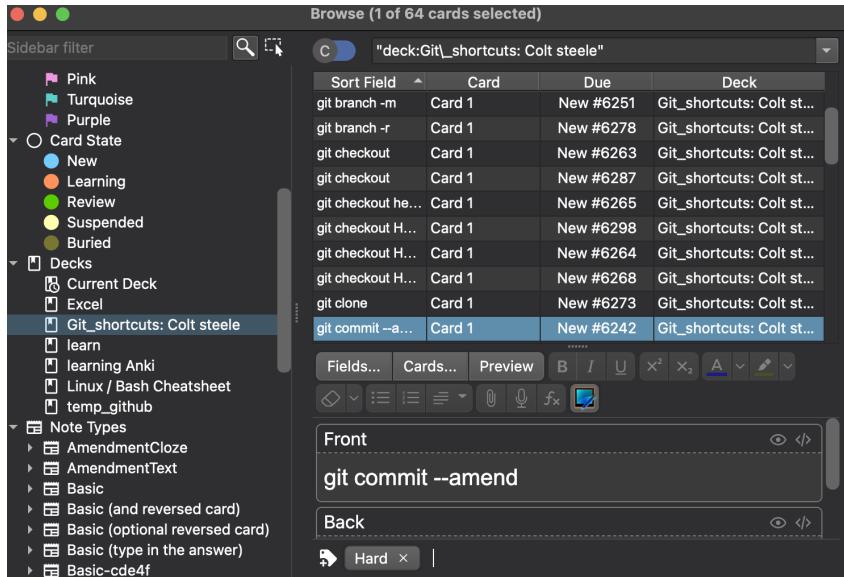

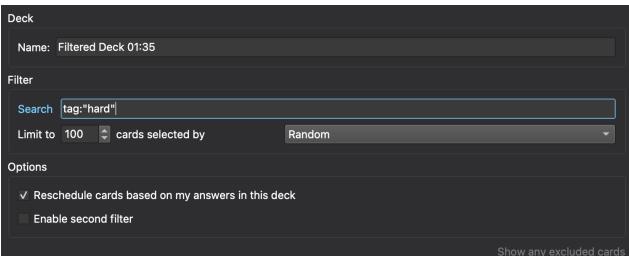

Figure 4: adding tags

Since no card was due. It didn't happen

This way is to focus on difficult cards.

Two tips:

Timer method

Use a timer method. All flashcards are equally important. So u don't spend too much time on one.

Breakdown large flashcard into small pieces to be taken.

The last tip: is u don't have to memorize everything in the image at once. You could ask to show me in 1m. Like u have

mango,oranges, banana, pineapple.
So u'll remember mango,oranges. And u move on to the next flashcard.
And after 1m or less. It will show u again.
And u can remember banana and pineapple again.

My space repetition time:
